

ERRATA

“Factor V Leiden mutation does not affect coagulopathy or outcome in lethal H1N1 influenza”. M. Schouten, K.F. van der Sluijs, J.J.T.H. Roelofs, M. Levi, C. van’t Veer and T. van der Poll. *Eur Respir J* 2010; 36: 1346–1354.

We regret that an error appeared in figure 3 of the above manuscript. Part c) of the figure was incorrectly presented as a duplicate of part b). A corrected version of the figure, with part c) as it should have appeared, is presented below.

FIGURE 3. Lung histopathology in lethal influenza A infection. Lung haematoxylin and eosin staining 96 h after induction of lethal influenza A infection in a) wild-type mice, and b) mice heterozygous and c) mice homozygous for the factor V Leiden mutation. Scale bars=100 µm. d) Total lung pathology score 48 and 96 h after induction of lethal influenza A infection in wild-type mice (□) and mice heterozygous (▒) or homozygous (■) for the factor V Leiden mutation. Data are expressed as box-and-whisker diagrams depicting the smallest observation, lower quartile, median, upper quartile and largest observation. There were no statistical differences between the groups at either time-point.
