“Lung cancer survival in Norway, 1997–2011: from nihilism to optimism.”
Yngvar Nilssen, Trond Eirik Strand, Lars Fjellbirkeland, Kristian Bartnes and
Bjørn Møller. *Eur Respir J* 2016; 47: 275–287.

In table 2 of the aforementioned article from the January 2016 issue of the *European Respiratory Journal*, there were some errors in the confidence intervals regarding the variable smoking. The correct estimates should have been the following.

For all patients; multivariate analysis:

Current smokers: 1.18 (1.09–1.28) instead of 1.18 (0.94–1.03)

Former smokers: 1.06 (0.98–1.16) instead of 1.06 (0.97–1.13)

For resected lung cancer patients; multivariate analysis:

Current smokers: 1.25 (0.87–1.80) instead of 1.25 (0.87–1.01)

Former smokers: 1.07 (0.73–1.57) instead of 1.07 (0.73–1.26)

Table 2 has been corrected and the online version of the article updated.
