| - Limited to urgent and high risk patients. 
  ➢ Prefer younger patients (age<65), without comorbidities. 
  ➢ +/-Negative PCR 48h before the test 
  ➢ In case of low community spread of COVID-19 fewer restrictions (regarding age and comorbidities). | - Preferred method. 
- Cardiorespiratory polygraphy. 
- Disposable equipment recommended if available. 
- Equipment disinfected, according to the manufacturer's instructions. | - Before study (symptoms, contact history) and/or swab. 
- Check again at time of the study for temperature, COVID-19 symptoms and +/-negative PCR. 
- Cleaning precautions for the physical space and equipment, according to local recommendations. |
| - Preferred to home sleep testing. | - Not preferred. 
- Disposable equipment is recommended if available. 
- Equipment disinfected according to the manufacturer's instructions. | - Before study (questionnaire). 
- Check again at time of the study for temperature, COVID-19 symptoms and +/-negative PCR. 
- Cleaning precautions for the physical space and equipment according to local recommendations. |
| - Initially postponed. Now, only limited to patients with suspected concomitant sleep-disorders. | - Preferred method 
- PSG/polygraphy and limited sleep test methodology. 
- The use of nasal cannulas is not recommended. 
- Disposable equipment is recommended if available. 
- Equipment disinfected according to the manufacturer's instructions. | - Before study (symptoms, contact history) and/or swab. 
- Avoid any evaluation in children, pregnant women, elderly and in patients with co-morbidities. 
- Cleaning precautions for the physical space and equipment, according to local recommendations. |
| - Limited to urgent and high risk patients. 
  ➢ Prefer younger patients (age 18-65yrs), without comorbidities. 
  ➢ +/-Negative PCR 48h before the test 
  ➢ In case of low community spread of COVID-19 fewer restrictions (regarding age and comorbidities). | - Preferred method. 
- Additional option of using of pickup/return instead of a delivery service model. 
- Disposable equipment recommended if available. 
- Equipment disinfected, according to the manufacturer's instructions. | - Before study (symptoms, contact history) and/or swab. 
- Check again at time of the study for temperature, COVID-19 symptoms and +/-negative PCR. 
- Cleaning precautions for the physical space and equipment, according to local recommendations. |

**Spain (5)**

- Limited to urgent and high risk patients.

**UK (8)**

- Preferred method.

**Germany (7)**

- Preferred method.

**Italy (6)**

- Preferred method

**USA (AASM, APCCSDD-ATS) (2, 3)**

- Preferred method.

**Canada (4)**

- Preferred method.

**Notes:**

- In-laboratory PSG does not apply.

- Home sleep testing does not apply.

- Screening for COVID-19 does not apply.

**Similarities**

- All patients are assessed prior to their in-person appointment by phone for COVID-19 (symptoms, contact history, or questionnaire).
- Patients are again checked at time of the appointment for temperature, COVID-19 symptoms and testing status upon their arrival at the sleep lab.
- General precautions to avoid crowding of patients in the waiting room.
- General protective measures for patients and staff according to national guidelines.
- Age and comorbidities are taken into account in Spain, Italy and USA for diagnostic study scheduling.
- Disposable equipment is recommended if available in most countries.

**Differences**

- In most countries, home sleep testing is preferred over in-laboratory testing, to minimise risks. On the other hand, the opposite applies to Germany. Furthermore, UK and Italy use apart from cardiorespiratory polygraphy, limited sleep test methodology.
- U.S.A has an additional option of using of pickup/return of equipment instead of a delivery service model and removal from service at least 72 hours before re-use.
- The use of nasal cannulas is not recommended in Italy.
- Patients and personal staff are screened by swab based on COVID-19 epidemiological status (community spread of COVID-19) and availability of the test.
- General precautions to avoid crowding of patients in the waiting room are stricter in UK and USA, based on available sleep lab facilities minimising face to face contact and sufficient air exchanges.
- In case of countries with high community spread of COVID-19, sleep labs are closed for visits.
