

Supplementary Material

Pathogen- and antibiotic-specific effects of prednisone in community-acquired pneumonia

Sebastian A. Wirz^{1*}, Claudine A. Blum^{2,3*}, Philipp Schuetz,³ Werner C. Albrich⁴, Christoph Noppen⁵, Beat Mueller⁶, Mirjam Christ-Crain^{2*}, Philip E. Tarr^{1*}, for the STEP Study Group^{**}

Supplementary Methods

Nasopharyngeal swabs, nucleic acid extraction, multiplex viral PCR.

Total nucleic acids were extracted from 489 nasopharyngeal swabs (eswab, Copan) between November 2011 and May 2014 by taking advantage the NucliSens miniMAG platform with the NucliSens magnetic extraction reagents (bioMérieux) according to the instructions of the manufacturer. Elution of these nucleic acid extracts was done in 20 µl. Amplification was performed using the Resplex v2 (Luminex technology, Qiagen, Hilden, Germany) and Anyplex II RV16 multiplex real-time RT-PCR test (Seegene, Seoul, South Korea) targeting influenza A, influenza B, parainfluenzavirus 1-3 (PIV), respiratory syncytial virus A and B (RSV A, RSV B), adenovirus (AdV), human rhinoviruses (HRVA/B/C), human coronaviruses (CoV 229E, OC43, NL69), human enterovirus (HEV), human metapneumovirus (MPV) and human bocavirus (HBoV).

Supplementary Table S1. Primary and secondary outcomes

1. Analysis by microbiological diagnosis

Pneumococcal Pneumonia

	Pneumococcal Pneumonia			All others
